Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/clokesh5054-a11/personalized-network-assistant.git
Programming Language(s)	Python
Framework(s) Used	FastAPI, Streamlit
Key Features Implemented	Event analysis, topic detection, personalized conversation generation, fact verification using Wikipedia API, conversation history tracking, feedback collection,
Pending / Incomplete Features	User authentication, database integration, cloud deployment, Gemini API integration
Setup / Run Instructions	1. Clone repository. 2. Create virtual environment. 3. Install dependencies using `pip install -r requirements.txt`. 4. Run backend using `python -m uvicorn app.main:app --reload`. 5. Run frontend using `streamlit run frontend/streamlit_app.py`.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The application analyzes event details and user interests to generate relevant conversation starters and networking suggestions. It also verifies event-related information, stores conversation history for future reference, and collects user feedback to improve the overall experience. The project follows a modular architecture with well-organized code, making it easy to maintain, test, and extend with future enhancements such as authentication, cloud deployment, and real-time notifications.
