Project: Personalized Networking Assistant

S.No	Architecture Component	Technology	Purpose
1	User Interface	Streamlit (Python)	Provides an interactive interface for entering event details, generating networking suggestions, viewing conversation history, and submitting feedback.
2	Application Server	FastAPI (Python)	Handles REST APIs, coordinates AI services, validates requests, and returns responses efficiently.
3	Local Data Storage	JSON Files (history.json, feedback.json)	Stores conversation history and user feedback locally for academic demonstrations.
4	Development Environment	Uvicorn + Streamlit	Supports local execution, testing, debugging, and project demonstrations.
5	Version Control	Git & GitHub	Maintains version history and enables collaborative development.
6	AI Libraries & External Services	DistilBERT GPT-2 PyTorch Wikipedia API	Performs semantic analysis, generates conversation starters, executes AI models, and validates factual information.
